5-YEAR PROJECTED COST COMPARISON

Repair path reflects cumulative, escalating repair and downtime costs based on age and failure frequency. Replacement path spreads the replacement cost over the new equipment's expected lifespan, plus minimal ongoing maintenance, so both paths are compared on an annualized cost-of-ownership basis.

Dental Chair — Sample Manufacturer

INDUSTRY BENCHMARK

At 12 years, this equipment has used 67% of its 18-year expected lifespan. Comparable dental chairs in this age range are generally repair-viable when costs are controlled.

SUGGESTED UPGRADE PATH — DENTAL CHAIR

DCI Edge

Purpose-built seating engineered for 18+ years of clinical reliability

"DCI Edge dental chairs are engineered specifically to address the failure modes most common in aging operatory seating — hydraulics, actuators, and foot controls — with one of the strongest warranty coverages in the US market."

- Hydraulic systems rated for 500,000+ positioning cycles — industry-leading durability
- 10-year structural warranty covers the frame, hydraulics, and base components
- Low-profile programmable foot control reduces the exact failure points common in aging chairs
- Full upholstery replacement available through a national parts network — no extended lead times
- Single-source service support simplifies maintenance and reduces callback frequency
